What does: "Debug_Code: 524, Message:
mysql_version_len:15 greatlen:13..." in Query Error Log
stand for?

Arun Sangameswaran - 2017-11-13 - 0 Comments - in ScaleArc Registered User

What does: "Debug_Code: 524, Message: mysql_version_len:15 greatlen:13..."

in Query Error Log stand for?

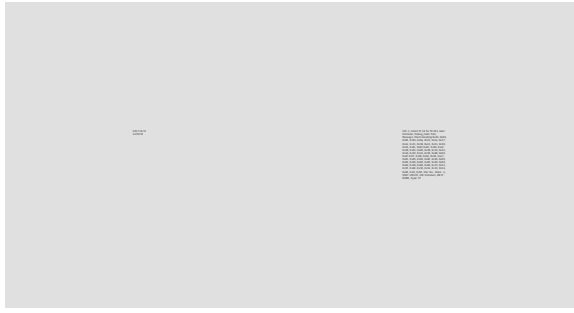

Release	Classification	Level	DB Name	Category
11.2.0	Message		PROD	Error Message

QUESTION

Why do i see the following error messages in my 'Query Error Logs' and what do they

mean?

ANSWER

These errors appear in Query Error Logs in the event where you added two MySQL DBs with different versions with in a cluster one after the other. For instance, if you initially had a MySQL 5.6.13 which has a version length of 6 bytes and then later added a MySQL 5.7.136

to the same cluster which has a version length of 7 bytes.

ScaleArc uses a static variable to store this length at the startup when the very first client

connection to ScaleArc is established (servergt).

Now with the second observer in the cluster with new version length, though ScaleArc will modify the greeting with the newly generated value correctly, it will yet log the discrepancy

in the error log.

That said, you may safely ignore these errors as they have no impact on any functionality.

You may also opt to restart ScaleArc clusters once to suppress these errors.

These are also charted out and tracked for getting dynamically handled without logging in

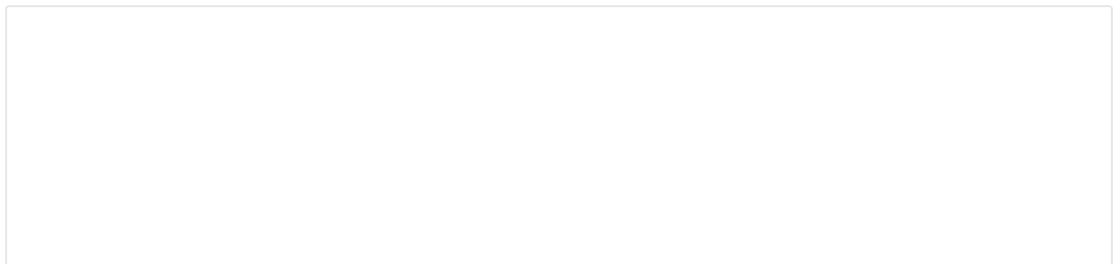

the future ScaleArc release.

If you are experiencing issues with ScaleArc or with any of its features, please contact ScaleArc Support. We are available 24x7 by phone at 855 800 7225 or +1 408 412 7315.
